

Guest Speakers: Adam Dean

Hudson Valley CyberSecurity Consortium Presents: CryptoLocker and Other Ransomware

Cryptolocker and other ransomware variants don't steal information, but rather hold your data and data that you have access to hostage through encryption. This presentation will give a technical understanding of what ransomware is, how it gets on to a system, its propagation, and how to recover from an infection. Real security incidents will be presented, including the identification, containment, eradication, and recovery steps.
